

MLSTravels – BRD & FRD

Business Requirements Document + Functional Requirements Document

A. BUSINESS REQUIREMENTS DOCUMENT (BRD)

1. Executive Summary

MLSTravels is a lightweight digital product intended to help a taxi/cab business owner manage and publish duty opportunities and allow interested joiners to discover and respond to them.

2. Business Objective

- Digitize the client's duty-sharing workflow.
- Provide a simple owner-controlled management experience.
- Make duty opportunities easier for joiners to discover.
- Create a clear workflow from posting to interest and completion.

3. Scope

In scope: owner access, duty creation/posting, duty details, joiner viewing, interest flow, status/completion management and supporting UI/workflow.

Out of scope: advanced fleet management, payment processing, automated payroll, complex dispatching, and other features not required for the initial MVP.

4. Users / Personas

- Owner: manages the business workflow and duty information.
- Joiner: views opportunities and indicates interest.

5. Business Requirements

ID	Business Requirement	Priority
BR-01	The owner must be able to manage duty-related posts.	High
BR-02	Joiners must be able to view available duty information.	High
BR-03	Joiners must have a clear way to express interest.	High
BR-04	The owner must be able to identify/manage the status of a duty.	Medium
BR-05	The solution should keep the workflow simple for non-technical users.	High

6. Success Criteria

- Owner can publish duty information through the product.
- Joiners can understand available opportunities and respond.
- The workflow is simple enough for the client's real business use.
- The delivered MVP reflects the agreed requirements.

B. FUNCTIONAL REQUIREMENTS DOCUMENT (FRD)

1. Functional Overview

The FRD translates the business requirements into product behavior and user flows.

2. Owner Workflow

Owner Login / Access → Owner Dashboard → Create Duty → Add Details / Image → Publish → View Interested Joiners → Mark Duty Completed / Manage Post.

3. Joiner Workflow

Open Website → View Available Duty → Read Details → Select Interest / Join → Follow the defined contact or response flow.

4. Functional Requirements

ID	Function	Expected Behavior
FR-01	Owner Access	Only the intended owner should access management functionality.
FR-02	Create Duty	Owner can enter required duty information.
FR-03	Add Media	Owner can attach an appropriate image where required.
FR-04	Publish Duty	Published duty becomes visible through the joiner-facing workflow.
FR-05	View Duty	Joiner can view the relevant duty details.
FR-06	Express Interest	Joiner can indicate interest through the defined action.
FR-07	Manage Status	Owner can mark a duty as completed and manage its visibility.

5. Acceptance Criteria Examples

- Given the owner has access, when required duty information is entered, the owner can submit a duty post.
- Given a duty is published, a joiner can view the relevant information.
- Given a joiner selects the interest action, the intended response/contact workflow is triggered.
- Given a duty is completed, the owner can mark it completed and manage its active visibility.

6. MVP Prioritization

- P0 / Must Have: Owner access, duty posting, duty details, joiner view, interest flow.
- P1 / Important: completion/status management and usability improvements.
- Future: advanced analytics, fleet management and additional automation, if the client later requires them.
